

News-Authenticity RESTservice User Guide.

Version 1.0

The application is a backend service providing data in the form of json. The user can implement the data in UI design of his or her choice. The service can be accessed at the url below

https://news-authenticity.herokuapp.com/api/documentation

Registration

The service needs the user to be registered with 'https://newsapi.org/' and obtain the APIKey to use the service. This can be either free or paid for. However, free version of the APIKey cannot be used for commercial projects. The organization provides news from several news and information providers.

Services:

1	https://news-authenticity.herokuapp.com/api/credibility?news=?&title=?
	This service can be used without APIKey from 'newsapi.org'. The service takes title and body of the article and returns the analysis of the same.
